**Commented [IAB1]:** Design palang po ito, any information or content na nakalagay po dito ay p-pwede pang palitan.

Dito nakalagay lahat ng record na galing dun sa Account Registration natin. Once na nag register yung user, dito yun mapupunta. Since na demonstrate ko naman na ung sa Mobile Application last meeting. Mabilis niyo lang to map-pick up.

Yung gmail and password yun yung magiging gateway ni user para makapasok sa Mobile Application natin

**Commented [IAB2]:** Let say nakapag fill na si user ng Curfew Pass requirements dun sa Mobile app tapos sinubmit nya, dito yun marerecord at ifafacilitate ni Admin kung valid ba yung ID

Yung sa part na kapag hindi valid yung ID; I think siguro mas okay kung mag lagay tayo ng table (para sa **pending requirements**). Mag r-release lang si admin kung okay na ba yung requirements na pinasa ni user. Dun na mag m-message si Admin kay user na kesyo ganito ganyan.  
*\*Malabo yung picture blah blah blah\* (gamit yung third party app gmail or contact number kasi sabi nyo last time mostly ng nag rerequest ng ID is elder)*

@Verbo kung nababasa mo to ganto yung magiging layout natin. Possible na mabago pa to kung may isasuggest pa kayo or si sir

Add QR Code

**Commented [IAB3]:** Ito naman yung sa part na kapag navalidate na yung barangay ID or COR ni user. Iniisip ko lang kung papano yung process dito sa QR Code. (Kasi feeling ko manually yung pag lagay ng QR Code – gagamit tayo ng website na nag g-generate ng QR Code)
